

AI ENGINEER ROADMAP

Your 3-Month Intensive Plan to Break Into AI Engineering

"Ninety focused days beat a year of scattered effort."

ABTalks 60-Day Claude Challenge · Day 4

📍 CURRENT POSITION

Status: Student

Core Skills: Python (foundational level)

Experience: Early-stage — no formal ML/AI project experience yet

Strengths: Solid language base to build on, fast learner, clear 3-month focus

🎯 TARGET GOAL

Goal: Become an AI Engineer

Industry: AI & Machine Learning

Timeline: 3 Months (Intensive)

Target: Portfolio-ready + applying to AI internships/junior roles

📊 SKILL GAP ANALYSIS

Skills To Build

- ▶ Data Structures & Algorithms + Git/GitHub
- ▶ Math for ML: linear algebra, probability, stats
- ▶ Core ML with NumPy, Pandas, scikit-learn
- ▶ Deep learning basics (PyTorch/TensorFlow) + LLM/prompting

Impact of Closing Gaps

- ▶ Ready to build real, working ML projects
- ▶ Stand out in internship & junior-role applications
- ▶ Confident explaining models in interviews
- ▶ Portfolio becomes proof of skill, not just claims

📅 RECOMMENDED LEARNING PLAN

WEEKS 1-4

Phase 1: Foundations

- ▶ Python: OOP, file handling, practice problems
- ▶ DSA basics + Git/GitHub + SQL fundamentals
- ▶ Math refresher: linear algebra, probability, stats

WEEKS 5-8

Phase 2: Machine Learning

- ▶ NumPy, Pandas, Matplotlib/Seaborn
- ▶ Core ML algorithms with scikit-learn
- ▶ Model evaluation & first ML project

WEEKS 9-12

Phase 3: Deep Learning & Career Prep

- ▶ Neural nets + intro PyTorch/TensorFlow
- ▶ LLM & prompt engineering basics
- ▶ Portfolio polish, resume, apply & mock interviews

📁 SUGGESTED PROJECTS

- BEGINNER** Data cleaning + EDA project with Pandas
- BEGINNER** Simple ML classifier (e.g. spam detector)
- INTER** End-to-end ML project + Streamlit deployment
- INTER** Mini deep learning image classifier
- ADV** LLM-powered app (chatbot / RAG tool)

🌐 NETWORKING STRATEGY

- ▶ Join AI/ML communities (Kaggle, Discord, LinkedIn groups)
- ▶ Share build-in-public progress weekly
- ▶ Connect with AI engineers & recruiters
- ▶ Contribute to an open-source ML repo
- ▶ Attend virtual meetups/webinars

📅 MONTHLY MILESTONES

Month	Milestone
Month 1	Python + DSA + math foundations solid · GitHub profile live
Month 2	2+ ML projects built · core ML concepts mastered
Month 3	Deep learning + LLM project done · portfolio & resume ready · applying to roles

⚡ IMMEDIATE NEXT ACTIONS (START TODAY)

- 1 Set up your GitHub profile & first repo
- 2 Complete a Python refresher: OOP + practice problems
- 3 Start a Python-for-Data-Science course today
- 4 Join one AI/ML community (Kaggle or Discord)
- 5 Block a daily 2-hour study slot on your calendar

Consistency + Practice + Projects = Career Ready

Remember: Consistency Today, Success Tomorrow!
